RE: JAVA SOFTWARE ENGINEER, REF.NO XXXX

Dear Sir or Madam,

I am writing to express my interest in the Java Software Engineer position for one of your clients within the Financial Services Sector. With 40 years of experience in software development and DevOps engineering, I bring a wealth of practical knowledge, architectural insight, and a proven track record of delivering robust, scalable solutions across various sectors including finance, telecom, logistics and government.

Throughout my career, I have designed and implemented enterprise-grade systems using Java and the Spring ecosystem, with recent focus on MicroServices, CI/CD automation, and containerized deployments. My expertise spans the full development lifecycle—from requirements gathering and system design to deployment and production support—underpinned by agile and DevOps practices.

I have led the modernization of legacy systems, introduced infrastructure-as-code with tools like Terraform, and built resilient pipelines using Jenkins, Git, and Helm. My approach is results-driven, collaborative, and quality-focused, always aiming to add long-term value to both product and team.

I am enthusiastic about the opportunity to contribute to your organization's success with my deep technical experience and strategic mindset. I would welcome the chance to discuss how my skills and background align with your development goals.

Thank you for considering my application. I look forward to the opportunity for an interview.

Warm regards,
Robert Rong
